PLEASE NOTE: The report "could" contain "Pirate/SLIM" operations or more likely a "BUSTED CALLSIGN". As always, you never know - "Work First Worry Later".

4K6, AZERBAIJAN. Operators David/DL7ZM and Boris/4K4K, along with a team from/at the Nasir al-Din al-Tusi Shemakhi Astrophysical Observatory (1500m asl, LN40HS), will be active as 4K6/DL7ZM between July 1-10th. Activity will be 6 meters only using CW, SSB and FT8; with 100 watts, 7 and 3 element yagi and a noise cancelling system. QSL via AD0PY direct.

C2, NAURU (6M EME DXpedition). Lance, W7GJ, reported last week of the following: I apologize for the delay in getting back to after posting the poll last fall asking for the "most wanted" locations for a 6m EME DXpedition.. I was dissuaded from Lord Howe Island and the Solomon Islands because I located other operators who are still hoping to activate those on 6m EME. I had hoped to activate T2, but after 5 months of waiting for a confirmation on an operating site there, I decided to move forward with an alternate location for this year. I know C2 wasn't even on the poll because at the time I felt it was too difficult and too expensive to pull

off successfully. However, when T2 was not moving forward, I decided to put my energies toward making Nauru work anyway, since it is so rare on 6m in Regions 1 and 2.

It is understandable why it is so rare. There are no longer any active hams there, it is expensive and difficult to get to, and it is very expensive to stay there. On top of that, there are very few places to set up a serious EME operation. However, I think I have found what appears to be a very favorable operating site (although there are still unknowns regarding exact available antenna space, and local electrical noise) on the northeast corner of the island overlooking the ocean on moonrise. Because of its location, I will have moonrise at the same time as moonset in much of western Europe, and I should be able to work the rest of central and eastern Europe and Africa during their moonrise while I am elevated. My only common moon with Region 2 will be during my moonrise or while I am elevated. As usual, I will be posting a detailed planned operating schedule on my web site as soon as I can, but I wanted to get this formal announcement out as soon as I could. I had just been waiting for the VISA, license processing and airline tickets to be in hand before making a formal announcement.

The details available so far are on my Web site here:

http://www.bigskyspaces.com/w7gj/Nauru%202018.htm

With the great increase in 6m digital activity using WSJT modes, I hope there will be many new 6m stations interested to try 6m EME on JT65A mode. Please read the instructions on the above web page to make sure you operate following the procedures I have outlined! I do expect to be able to access the internet on a regular basis, so will be updating my web page with status updates as well as stations worked. I will have trouble elevating above 50 degrees, so for best results, please try to catch me when my moon is lower than that. I also may try to operate some FT8 on 20m with the barefoot FT857 near the end of the trip after the optimum days for 6m EME operation have passed.

GL to all, and I look forward to being able to hand out an ATNO with virtually every half million mile contact! More info to come..."

REALTIME BAND CONDITIONS WEB SITE :
The purpose of this experimental Web site is to provide 24-7-365 actual (REALTIME) band condition information to CW QRPp, QRPe and CW/SSB for Contesters interested in increasing their scores. It can also be of benefit to other Radio Amateurs to determine band conditions for Nets and casual QSO's. This information is NOT based on any software predictions or any kind of satellite based readings. It is based on a new Ionospheric sounding method called "HF Ionospheric Interferometry" which operates very similarly to the PolSAR system used by NASA.
